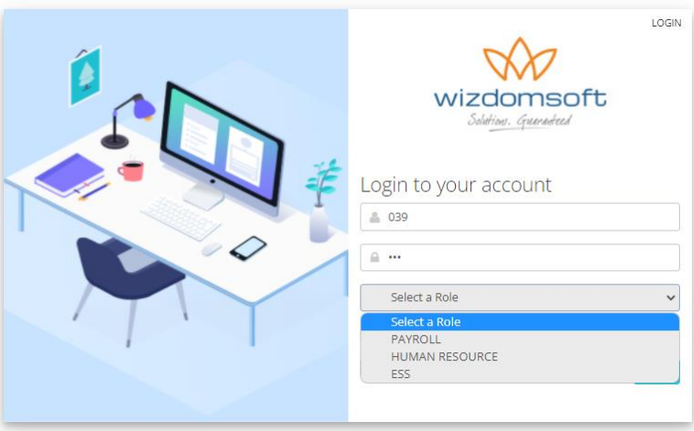
Introduction for HR Module:

- A Human Resources Management System (HRMS) is a software application that combines many human resources functions, including benefits administration, payroll, recruiting and training, and performance analysis and review into one package.
- HRMS is also known as Human Resources Information System (HRIS).
- We can define the Employee Dependent details, Document details, Training details and Past Education details and so on.

Login Screen:

- Type the Username and Password, then the company and role will populate automatically.
- Choose the Role as HRMS and click Login button.



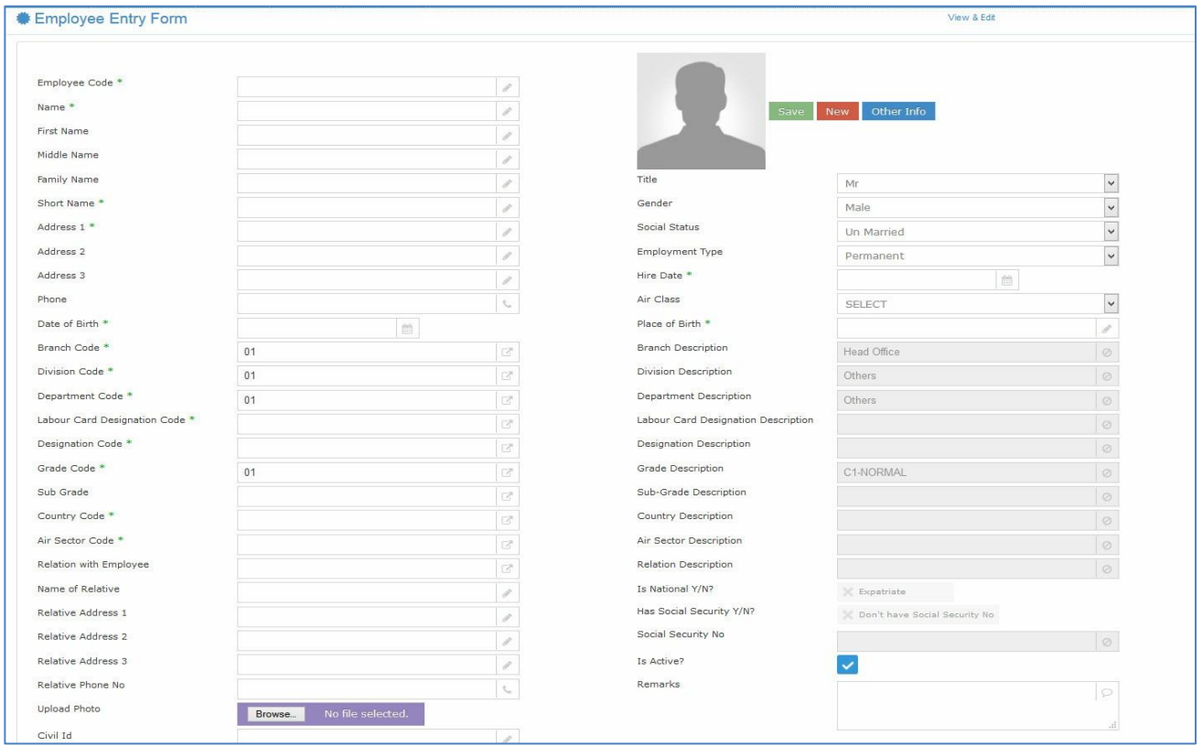
- It will take you the payroll home screen where you will find the payroll menu.
- Reset button is to reset information in the login page.

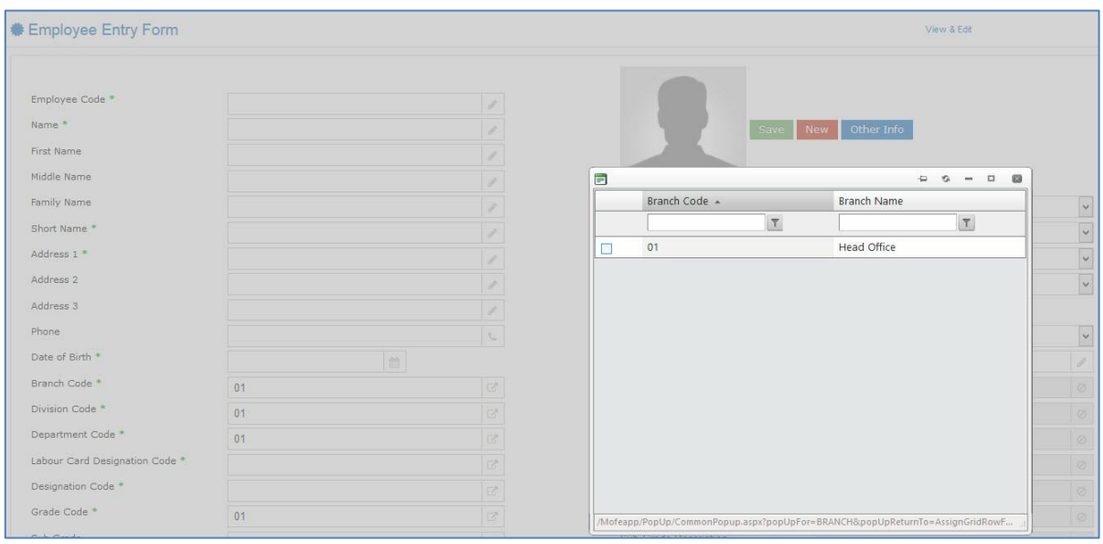
Employee Entry:

- Under the Master menu, choose the Employee Entry menu.
- It will take you the employee entry screen where you have to save all the employee details in the required fields.
- The symbol " * " defines the mandatory entry. You have to fill the information as mandatory.
- Fill all the required Information and click save button.
- Click Other Info button to save the employee other information like Gratuity details,

periods, leave passage details, Indicators and Fare/Family status details.

- Click Update button to save the information.





- The popup will be populated for entering Branch, Division, Department, Designation, Grade, country and sector.
- View the existing Employee details by clicking view & edit link in the page
